

Rust Converter

This is a product for controlling rust in the auto industry. It is an economical, effective, safe, and simple product that converts rust into a black colored metal. This metal has a hard protective, durable coating to seal out moisture and oxygen to prevent further rusting.

This is the first step to rustproofing a used car that has existing rust. If you do not apply this step first before rustproofing or undercoating, you are simply making it look nice for a short while. You will make the rust worse if you do not fix or stop it before rustproofing or undercoating your vehicle.

DO I SPEND THE MONEY TO RUSTPROOF MY CAR?

- Used vehicles can be rustproofed effectively. However, rust should be pre-treated or etched as security of permanent adhesion to prevent future rust problems.
- Some damage from rust to unibody vehicles can leave a vehicle unsafe to drive as it depletes the structural integrity of a unibody vehicle.
- Rustproofing gives you the security of knowing your car is protected when salt hits the road.

Examples of larger applications.

BENEFITS OF RUST CONVERTER

- Converts rust to a water proof, rust free surface and displaces moisture.
- There is no need to sand blast or grind material before application.
- Works overnight.
- Long Lasting.

- Can be rustproofed over with no problems.
- Should be used to convert rusted surfaces to a material ready surface, like an undercoating.
- Replacing brake lines one time can exceed the cost of a complete rustproof and undercoat.
- A reputable rustproofers should offer annual inspection and re-spray services as a follow-up to the first initial rustproof of your car or truck.
- Many rustproofers apply their products over rust which is not recommended by any sealant manufactures.

RUST FACTS

- Rust depletes value of a vehicle.
- One rust repair can cost as much or more than a complete rustproof and undercoat.
- On average, rust begins the first 2-3 years on an unprotected vehicle.
- Rust causes seams to expand and pop open, causing more damage and allowing more rust to form.
